Professional Summary

Builder-focused Computer Science student with experience in developing end-to-end software systems using Full-Stack technologies and Machine Learning. Designed and implemented real-world projects including AI-based traffic optimization and disaster response systems. Passionate about solving practical problems, optimizing system performance, and continuously learning to build scalable and impactful solutions.

Skills

- Languages:** Python, Java, JavaScript
- Backend:** Node.js, Express.js
- Databases:** MongoDB, SQL
- Frontend:** React.js, HTML, CSS
- Tools:** Git, VS Code, Jupyter, Google Colab
- Concepts:** Computer Vision, Machine Learning, Deep Learning, Neural Networks, NLP

Internship

Software Engineer Intern (Full Stack Developer) May 2025 – July 2025
Witzeal Technologies Pvt. Ltd. Gurugram, India

- Built and debugged backend modules using Node.js and SQL, improving system stability and performance.
- Optimized database queries and reduced response time for key application features.
- Contributed to end-to-end full-stack development, including backend logic and frontend integration.
- Assisted in deployment and testing of web applications in a production environment.
- Collaborated with developers to identify and fix critical bugs, improving overall application reliability.
- Worked with real-world datasets and implemented efficient data handling using SQL.
- Gained hands-on experience in building scalable web applications and understanding production workflows.

Projects

1. AI-Powered Traffic Management System 2024-2025

 - Developed a Python-based intelligent traffic system for real-time vehicle detection and congestion analysis.
 - Used YOLO, OpenCV and Python for real-time vehicle detection.
 - Implemented automation logic for dynamic signal prioritization and emergency vehicle preemption.
 - Independently designed and built end-to-end systems from idea to deployment.
2. Disaster Response Drones for Remote Areas 2025-2026

 - Built an AI-assisted automation module for survivor detection and geotagging in disaster scenarios.
 - Deployed YOLO-based models on NVIDIA Jetson Nano for edge inference.
 - Integrated GPS data processing and real-time data transmission using Python.
 - Optimized detection pipelines for reliability and performance in aerial imagery.

Certificates

- UI Educon-Cloud Computing and Database Management Using SQL and Python
- Data Structures and Algorithms (Java) – Apna College
- Ethics in Engineering Practice (NPTEL, IIT Madras)
- Java Foundations (Oracle Academy)

Achievements

- 1st Prize, Techinfra 2.0 (2025) for the Disaster Response Drone project.
 - 1st Runner-up – 6th Technovation Hackathon.
- Nov 2025
Jan 2025

Education

Sharda University, Greater Noida Aug 2023-Present
B.Tech in Computer Science Engineering (Artificial Intelligence for IoT)
